## **Project Manager**

### **About Better Together Solar**

Better Together Solar is a veteran owned small business that creates “turn-key” solar solutions for commercial, residential and nonprofit clients. We understand the site-specific demands of operating solar in NE Ohio and take pride in our professional interaction with clients throughout their installation process. Projects begin with site assessments and interviews where we seek to understand and refine client’s ideas and goals. Better Together Solar uses a proprietary engineering, design and rendering solution to turn these draft ideas into a system design that will maximize the electricity generating potential of any site. By integrating the best available technology and monitoring these systems for years after installation, we ensure that our systems perform at peak output. Our happy clients use solar PV systems to achieve energy independence, sustainable living and social leadership; along the way their systems also generate a steady financial return. We have grown over the years as more businesses (commercial, industrial, schools, hospitals, retail, etc.) realize the importance of investing in projects that will reduce their energy consumption to become more energy independent. This shift in behavior has created a special opportunity for our business and we are currently looking to add a Project Manager to join our team.

### **Job Summary**

The Project Manager will be responsible for the design and installation of solar PV projects. The candidate should have a flexible and respectful personality to handle the multiple steps to see a project to completion. This include meeting with owners and design professionals to determine project requirements, managing client satisfaction and taking immediate action to respond to problems or concerns. The PM will visit work sites, clarify the scope of work, prepare cost estimates and evaluate projects for value-engineer cost savings. The PM will also negotiate contracts, subcontracts and purchase orders to assure that all project goals are being addressed.

### **Job Details**

- Strong organizational and team building skills
- Be an expert in using solar design software
- Manage the construction workflow process
- Provide management feedback to improve business operations and enhance product/service offerings
