Solar Technician

Job Summary

Our installation team plays a critical role in the development and execution of Better Together's solar projects. Solar Technicians participate in all phases of solar project installations from site assessments to gathering materials for the installation to the project's physical installation. You will assemble and maintain Solar PV systems on roofs and ground structures per site specific designs. Job tasks include working at heights and on sloped roofs, measuring, moving, assembling, and bolting structural framing and solar modules. Being comfortable on a pitched roof is a very important aspect of this position. Work experience in solar is preferred, but a positive attitude and work ethic is critical. This position requires knowledge of, and ability to use hand tools such as a socket wrench and drill. Setting up/ taking down ladders and safety equipment is a must have ability. If you don't already have your OSHA-10 card, you will need to complete that training prior to starting any construction work in the field. Concise on-site communication with fellow members and customers is expected. Compensation is determined by your ability to perform residential and commercial solar installations.

About Better Together Solar

Better Together Solar is a small business that builds solar PV systems for commercial, residential, and nonprofit clients. We understand the site-specific requirements of operating solar in NE Ohio and take pride in our professional interaction with clients throughout their installation process. Projects begin with site assessments and interviews where we seek to understand and refine client's ideas and goals. By integrating the best available technology and monitoring these systems for years after installation, we ensure that systems perform at peak output. Our happy clients use solar PV systems to achieve energy independence, sustainable living and social leadership; along the way their systems generate a steady financial return. We have grown over the years as more businesses (commercial, industrial, schools, hospitals, retail, etc.) realize the importance of investing in projects that will reduce their energy consumption to become more energy independent. This shift in behavior has created a special opportunity for our business and we are currently looking to add several Solar Technicians to assist with the energy services projects.

Minimum Qualifications

- A valid driver's license
- A willingness to embrace personal development and the ability to lead by example
- Ability to pursue safety credentials (OSHA 10)
